

Algorithm: Student Marks, Percentage, and Grade

1. **Start**
2. **Input marks of four subjects**
(M1, M2, M3, M4)
3. **Calculate Total Marks**
$$\text{Total} = M1 + M2 + M3 + M4$$
4. **Calculate Aggregate Percentage**
$$\text{Aggregate} = (\text{Total} / 400) \times 100$$
5. **Check Aggregate and assign Grade**
 - If $\text{Aggregate} \geq 75 \rightarrow$ **Distinction**
 - Else if $\text{Aggregate} \geq 60$ and $< 75 \rightarrow$ **First Division**
 - Else if $\text{Aggregate} \geq 50$ and $< 60 \rightarrow$ **Second Division**
 - Else if $\text{Aggregate} \geq 40$ and $< 50 \rightarrow$ **Third Division**
 - Else $\rightarrow$ **Fail**
6. **Display Total Marks**
7. **Display Aggregate Percentage**
8. **Display Grade**
9. **Stop**

5.1.2. Student Grade Based on Aggregate

02:19

Write a program to calculate the total marks, aggregate percentage, and grade of a student based on marks in four subjects. The grade is determined as follows:

- Aggregate $> 75\%$: Distinction
- Aggregate $\geq 60\%$ and $< 75\%$: First Division
- Aggregate $\geq 50\%$ and $< 60\%$: Second Division
- Aggregate $\geq 40\%$ and $< 50\%$: Third Division
- Aggregate $< 40\%$: Fail

Input Format:

- Four space-separated integers representing the marks in four subjects.

Output Format:

- The first line should print the total marks.
- The second line should print the aggregate percentage with two decimal places.
- The third line should print the grade.

Constraints:

- $0 \leq \text{marks in each subject} \leq 100$

Sample Test Cases

studentG...

Submit

```
1 marks = list(map(int, input().split()))
2 total = sum(marks)
3 aggregate = total / 4
4
5
6 if aggregate > 75:
7     grade = "Distinction"
8 elif aggregate >= 60:
9     grade = "First Division"
10 elif aggregate >= 50:
11     grade = "Second Division"
12 elif aggregate >= 40:
13     grade = "Third Division"
14 else:
15     grade = "Fail"
16
17
18 print(total)
19 print(f"{aggregate:.2f}")
20 print(grade)
21
22
```
